

Project Design Phase
Proposed Solution Template

Date	29-06-2026
Team ID	23A51A05H9
Project Name	Automated Network Request Management
Maximum Marks	2 Marks

Proposed Solution :

S.No.	Parameter	Description
1	Problem Statement (Problem to be solved)	Traditional leave management relies on slow paper forms, scattered emails, or disjointed spreadsheets, leading to tracking errors, lack of visibility into request status, manual policy validation overhead (e.g., entering invalid dates), and delayed approval cycles that frustrate employees.
2	Idea / Solution description	Develop a custom scoped Leave Approval System on ServiceNow that allows employees to digitally request leave by selecting dates and types. The app enforces front-end date validation (preventing end dates earlier than start dates) and leverages Workflow Studio (Flow Designer) to automate manager routing, status tracking, and instant email/system notifications.
3	Novelty / Uniqueness	The solution unifies client-side data validation, dynamic workflow routing, automated multi-channel notifications (email and platform alerts), and centralized record management within a single secure ServiceNow scoped application, eliminating the need for external tools or manual compliance checks.
4	Social Impact / Customer (Employee) Satisfaction	Boosts employee experience by reducing manual friction and approval bottlenecks, provides full transparency over request lifecycles, ensures operational fairness through automated policy guardrails, and enhances overall workforce morale via an intuitive self-service portal.
5	Business Model (Value & Efficiency Model)	Value is generated through operational cost reduction and productivity gains. The system eliminates HR administrative overhead, reduces compliance risks by strictly enforcing leave rules, prevents project delays by tracking resource absences, and streamlines audit trails for corporate governance.
6	Scalability of the Solution	Built on the enterprise-grade ServiceNow cloud platform, the solution can seamlessly scale to accommodate an increasing volume of users, departments, and global locations. It is easily expandable to support future enhancements like automated leave balance tracking, holiday calendar integrations, and ServiceNow Mobile Agent access.
