

Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	29-06-2026
Team ID	23A51A05H9
Project Name	Automated Network Request Management
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

Requirement ID	Functional Module	Functional Requirements / Actions
FR-1	Leave Request Submission	Select Leave Type (Annual, Sick, Casual, Unpaid)Select Leave Start DateSelect Leave End DateEnter Reason for Leave (Optional text)
FR-2	Date Validation	Validate selected leave durationCompare End Date with Start Date dynamicallyPrevent submission if End Date is earlier than Start DateDisplay instant error message on the form
FR-3	Request Processing	Submit Custom Leave Request formGenerate Custom Leave Request Record NumberSet default application status to "Requested"
FR-4	Routing & Approval Lifecycle	Auto-populate employee's direct line managerTrigger Workflow/Flow Designer execution upon entryRoute Approval Task directly to the assigned Manager
FR-5	Notification Management	Send dynamic confirmation email upon manager approvalSend alternative rejection email upon manager denialTrigger real-time in-app alerts via the top banner Notification Bell
FR-6	System Record Updates	Update custom record Status field to "Approved" or "Rejected"Log manager response timestamps and commentsStore historical transaction state for audit and HR reporting

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	The system should provide a clean, clear, and modern responsive interface (Service Portal / Employee Center) allowing employees to submit requests and choose leave types without requiring specialized training.
NFR-2	Security	The system must ensure strict data privacy using authenticated corporate accounts, end-to-end HTTPS encryption, and Role-Based Access Control (RBAC) via Scoped Application Security to prevent employees from viewing peer records or manipulating manager choices.
NFR-3	Reliability	The system must consistently evaluate date constraints using client scripts and execute Flow Designer approval logic flawlessly, ensuring request entries do not get lost or stuck without a transparent transaction state.
NFR-4	Performance	Client-side validation for date boundaries and auto-populating field scripts (GlideAjax) should execute in near real-time (under 2 seconds) to ensure a fluid, snappy submission experience for the worker.
NFR-5	Availability	The custom application must achieve 99.9% uptime, remaining accessible 24x7 across desktop and mobile devices via the ServiceNow cloud infrastructure for off-site or urgent sick leave logging.
NFR-6	Scalability	The application architecture should seamlessly scale to support localized expansions, handling spike frequencies in year-end corporate leave requests across multiple operational departments without degrading processing speed.
