

Project Design Phase-II

Data Flow Diagram & User Stories

Date	29-06-2026
Team ID	23A51A05H9
Project Name	Automated Network Request Management
Maximum Marks	4 Marks

Data Flow Diagrams:

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
Employee	Leave Request Submission	USN-1	As an employee, I can select a leave type and add my desired dates.	Form lets the user select choices (Annual, Sick, Casual, Unpaid) and records inputs.	High	Sprint-1
Employee	Leave Date Validation	USN-2	As an employee, I am prevented from selecting an end date that is earlier than my start date.	An error message appears and clears the invalid end date immediately upon change.	High	Sprint-1
Employee	Leave Request Submission	USN-3	As an employee, I can submit my leave request to trigger the lifecycle.	Record is successfully created in the custom table with a default status of Requested.	High	Sprint-1
Manager	Manager Approval Workflow	USN-4	As a manager, I can view pending leave requests routed to me directly.	Approval tasks are created and linked straight to the custom leave record.	High	Sprint-1
Manager	Manager Approval Workflow	USN-5	As a manager, I can approve or reject a pending leave request.	Action updates the parent leave request record status field to Approved or Rejected.	High	Sprint-1
Employee	Notification Service	USN-6	As an employee, I can receive an email notification indicating my manager's decision.	Automated email includes dynamic fields (dates, status) and drops directly into outbound logs.	High	Sprint-1
Employee	In-App Alerts	USN-7	As an employee, I can see a live update inside the platform without checking external mail.	An in-app push alert updates the top-right notification bell banner in real time.	Medium	Sprint-2
Administrator	User Configuration	USN-8	As an admin, I want employee profiles to auto-populate their assigned manager on the form.	A script triggers on load/change to fetch and assign the correct sys_user manager field.	High	Sprint-1
