Solution Fit:

The **Leave Approval System**, developed as a custom scoped application on the ServiceNow platform, provides a digital and automated solution to overcome the manual overhead, tracking errors, and delays associated with traditional leave management processes. The system enables employees to effortlessly request time off by selecting their leave types (such as Annual, Sick, or Casual leave) and specifying their planned dates through a user-friendly form interface.

To ensure data integrity and prevent scheduling conflicts, the solution utilizes front-end client logic to enforce strict validation constraints, instantly blocking users from selecting an end date that is earlier than the start date. Upon submission, the platform's **Workflow Studio (Flow Designer)** automatically intercepts the record, dynamically routing it to the employee's designated manager for review. The system automates the decision lifecycle by updating the request status in real-time and instantly firing out confirmation notifications to the employee once a manager has approved or rejected the request.

Additionally, managers and HR administrators can track leave balances, manage historical records, and monitor organizational absence trends through native ServiceNow dashboards and reports. By digitizing the entire leave lifecycle, the solution minimizes processing bottlenecks, improves corporate operational efficiency, ensures transparent communication, and scales effortlessly to support modern workforce management.
